

RESEARCH TECHNICIAN II

The Duke Human Vaccine Institute, a part of Duke University Medical Center, occupies a place of national and international leadership in the fight against major infectious diseases. DHVI currently has openings for a Research Technician II.

The Research Technician duties may include flow cytometry, data analysis, experimental design and method development; laboratory research with animals; gene cloning, sequencing, cryopreservation, PCR, PBMC processing, transfections, protein purification, immunohistochemistry, antibody binding kinetic analysis and characterization, and surface plasmon resonance (using BIAcore). Other immunological assays include Western Blots, ELISA, ELISPOT, and tissue culture. Applicants must possess a BA/BS in a physical or biological science with related experience.

Candidates should submit a resume to:

DHVI Human Resources
DHVI.Careers@notes.duke.edu
Please note "RT II" in the subject line.
